PARADIGM SPORTS

Equipped with the new **Infinion** powered "**Kaddy-Link**" Remote you have complete control of speed, turning, full dynamic braking & stop/start functions. This latest version of "Kaddy-Link" gives the golfer an unprecedented operating range of up to 150 yards or more, therefore avoiding any mishaps resulting from loss of control.

The **soft touch control panel**, which is affixed to the Dyna Steer's handle adds other control options including five preset distance settings, battery condition indicator, and a keyless anti-theft security code function.

Braking and speed control can be activated from the panel also. No need to switch modes, the Dyna-Steer will obey your command whether from the remote control unit or the control panel.

The **exceptional hill climbing ability** of the Dyna-Steer is provided by the twin motor, gear reduction drive units, delivering their power to the hi-traction, flat profile, urethane tires of the drive wheels. The wider wheel base of the MX9, in addition to the "Hill Tamer" rear wheel assembly provides spring assisted stability on

even the steepest inclines.

As its name suggests, the Dyna-Steer has **unique steering capabilities**. The microprocessor automatically selects one of two turning modes; course correction mode when traversing the fairway normally, or zero radius turning when requiring a full, quick turn. **No need for reverse** to complicate matters, simply allow the 'Kaddy to select the turning mode required. The new "smooth-flow" front wheel has been computer designed with a parabolic profile for even easier turning.

The enclosed, body design enables **quick and easy cleaning** of the 'Kaddy prior to transporting and storage, while, using the quick disconnect features, the Dyna-Steer disassembles in seconds and **takes up no more space than a conventional golf bag**, unlike competitive fold down units which promise convenience but use up more storage space due to their larger footprint.

The use of aircraft grade aluminum throughout contributes to the 'Kaddy's **extremely light weight**** and **corrosion resistance** which, in turn, is complemented by the use of hardened stainless steel drive axles.

All this, yet really simple to operate, the **Dyna-Steer** is the **best featured and constructed product in its class**.

Designed For High Performance & To Exceed The Demands Of All Weather Play

The Dyna-Steer MX9 comes with the powerful **X-Drive™** gel battery for extra long life and dependability. Each Kaddy also comes with a specially designed "smart" charger for quick and accurate charging.

** Body assembly weighs 19.7lbs., Total assembled weight 26.3lbs., Excl. Battery.

The Dyna-Steer MX9 is available in new eye popping body colour options; Silver metallic, Mid-Chrome Yellow, Forest Green. Each is complemented with a colour matched handle control panel.
